

AMANTHAPLIYAL
BACKEND SOFTWARE ENGINEER

Noida, Uttar Pradesh, India • +91 9997351985 • amanthapliya2000@gmail.com
LinkedIn/amanthapliyal GitHub/amanthapliyal-01

SUMMARY

Backend software engineer with 3+ years of experience developing, designing high quality backend systems. Proficient in C#, Asp.net, Java, Spring boot and modern software architectures, with a strong focus on scalability, maintainability and security. Adept at Test-Driven Development, database design and API development.

Backend & Development: C#, ASP.NET, Microservices Architecture, REST APIs, API Development, Java, Spring Boot, Entity Framework / EF Core.

Databases: SQL Server, PostgreSQL, Azure Document DB, Azure Graph DB

Cloud & DevOps: Microsoft Azure, Azure DevOps, CI/CD Pipelines, Containerization, Git

Tools: Visual Studio, VS Code, Postman, Jmeter,

AI & Automation: LLMs (OpenAI), Prompt Engineering, Multi-Agent Systems, Tool Calling

WORK EXPERIENCE

Coedify Technology LLP

May 2023 - Present

Equipped AI – Coedify client

- Developed ESG modules for a UK-based investment management platform, enabling dynamic and configurable entities through admin-driven workflows.
- Implemented role-based access control (RBAC) to enforce data access restrictions across assets and investments based on user permissions.
- Built automated data ingestion and processing pipelines for client-uploaded datasets, including approval workflows, audit trails, and change tracking.
- Developed and maintained RESTful APIs using ASP .Net core.
- Fix security gaps in Authentication process.
- Planned and Managed production deployments using Azure Dev Ops.
- Optimized Stored Procedure for report generation in SQL Server.
- Planned and delivered three modules on production – IRC module, XSML phase 2, ABM.

Revsco – Coedify Product

- An AI-powered revenue agent platform for managing outreach, follow-ups, replies, and customer memory.
- Developed a multi-tenant CRM backend with contacts, companies, programs, workflows, roles, and super-admin controls.
- Added inbound message handling for WhatsApp, so unknown replies are saved, grouped, and assigned without creating fake contacts.
- Built operator workflows for approvals, daily follow-ups, account pipeline, contact history, and cross-program context.
- Integrated email, WhatsApp, Google OAuth, Gmail drafts, calendar actions, webhooks, and delivery tracking.

PROJECTS

Azure Cosmos DB Graph Data Migration Utility

- Built a C#/.NET 6 console utility to migrate graph data between Azure Cosmos DB Gremlin containers, supporting vertex and edge extraction, JSON staging, and bulk import into a target graph database.
- Implemented a batch-based migration pipeline using GraphBulkExecutor, processing graph elements in configurable batches of 5,000 records to improve throughput and control large data movement.
- Preserved graph structure during migration by reconstructing GremlinVertex and GremlinEdge objects with IDs, labels, properties, in/out vertices, and partition-key mappings.
- Used Cosmos DB SQL API queries to discover edge labels dynamically, enabling label-wise edge export and reducing migration complexity for multi-label graph datasets.
- Added migration diagnostics including total execution time, request units consumed, successful document count, and failure count to validate import quality and performance.

EDUCATION

B. Tech in Computer Science and Engineering (Aug 2018 – May 2022)

Roorkee College of Engineering

Senior Secondary Education (April 2017 – March 2018)

Shri Bharat Mandir Public School
